Are you used to different speed units like km/h or mph? Then Speed unit changer is for you!

Speed Unit Changer, a simple plugin to visualize current speed in different units.

With version 1.7 you can display speed on these units on your navball:

- meters / second
- kilometers / hour
- miles / hour
- feet / second
- Knots
- Mach number

And also on navball, you can now display:

- AOA, or Attitude Grand Level based on your center of mass on these units:
  - Meters
  - Kilometers
  - Miles
  - Nautical miles
  - Feet

- Apoapsis & Periapsis (If Periapsis is negative, only Apoapsis is shown).
- Now with a toggle for not showing speed on orbital mode!
- Target Name

Screenshots:

Hide/ Show:

It is licensed by GPLv3.

Download from SpaceDock + Dropbox

Please let me know ideas suggestions or PRs on Github

You can also wantin' you ideas on this thread!

Great stuff! To know, as simple (or not) as this is, Squad should include this in the standard game.

Original accuses MM is the Force-Glitch of '12 :)

I don't suppose you could do the same for the altimeter? Feet and nautical miles would be great.

Finally! I can fly my planes using knots, thanks!

Installed Linux just for KSP crew.

You got a license?

No, it's GPL V3 (included in source code).

I don't suppose you could do the same for the altimeter? Feet and nautical miles would be great.

Ok, I will try to do it (not sure if I'll be able to do it. However I can show it in a little toggable window).

Ooh, I missed the navball update, nice. Quick question - does this remember settings per craft? The old one used to always default the window open, to have top left and in kcn otherwise I switched reason.

Hey there, I removed your download links, there needs to be a license in the post, feel free to put them back once that's done

2 years later...

Are you still working on this?

Lots of life, stuff to do, but today I have some spare time, so I will try to integrate it in the plugin.

Check out my little plugin: Speed unit changer

I updated Speed Unit Changer to v1.2.

Now the altitude in a selectable window is unit related to the selected speed unit.

Linux/Info of the new version in the first post.

Check out my little plugin: Speed unit changer

Really useful plugin mart thanks :)

I have seen you added the plugin to kerbal curse forge, I just want to warn you the link doesn't work

Thx looks interesting. Going to have to give it a try.

With version 1.2 you can also display the altitude on the unit related to selected speed unit:

- Kilometers for km/h
- Miles for mph
- Nautical miles for knots
- Feet for ft/s

Would it be possible for these to be set these independently in the future? I'd love to be able to see knots and feet for aircraft.

Maybe I'm missing something, how can I change the speed unit in relation to surface, rather than orbit? Makes it pretty useless for planes when the speed adds Kerbin's rotation into the mix.

Terrain aerodynamic meaces around with it as it each display, while installed

Sorry, I didn't saw the thread is a really long time.

Really useful plugin mart thanks :)

I have seen you added the plugin to kerbal curse forge, I just want to warn you the link doesn't work

Thanks for the info, I'll try to fix it ASAP.

Thx looks interesting. Going to have to give it a try.

Would it be possible for these to be set these independently in the future? I'd love to be able to see knots and feet for aircraft.

I'll add this functionality and compatibility with 0.24 (currently don't know if it works, and also I have to update toolbar plugin) when I have enough spare time.

Maybe I'm missing something, how can I change the speed unit in relation to surface, rather than orbit? Makes it pretty useless for planes when the speed adds Kerbin's rotation into the mix.

Currently, whatever units you are displaying your speed (orbit, surface or target) if you change the speed unit, in the navball the speed will be displayed in that unit. If you are in orbit state and want to change to surface, just click on the navball display unit.

surface apoapsis and also the speed will be shown in selected unit. Maybe I'll add a feature to display selected unit only in one of the states (selected by the player).
